

VOICE - The Virtual Open Incubation Ecosystem

Help us create more jobs in Europe

The VOICE project is a EU supported incubator currently under development. The goal is to create jobs by bringing people together in an international, online innovation and entrepreneurship platform.

The platform will allow users to share and co-create ideas with people from around the world. Users can form teams to develop their ideas with like-minded people or they can look for specific expertise among the many other users. Entrepreneurs can easily access the diverse crowd in the community for instant market analysis and feedback to their new ideas and products. Finally it is possible to seek funding for an idea through crowdfunding or regular investors. So the platform also works as a tool for investors to scan the market for new and innovative ideas. The platform will be the perfect place to match idea-makers with investors, crowdfunders and the diverse pool of competencies from the community.

To improve this platform, we can benefit from your help. So please take 5-10 minutes to answer our small questionnaire.

Thank you in advance.
